

# Drawing Pictures with Processing

Shapes, Colours, Numeric Data  
Types, Variables

# Admin Stuff

- Tutorials start next week
- TA office hours start next week
- Assignment 1 will be released by Friday, due the following Friday at 11:55pm

Eighth Grade

Computer

`rect(x,y,width,height);`

Example:

`rect(2,2,7,5);`

```
ellipseMode(CENTER);  
ellipse(x,y,width,height);
```

Example:

```
ellipseMode(CENTER);  
ellipse(4,4,5,7);
```

# Poll Everywhere Question:

What picture will the following code make?

```
size(130,130);  
ellipseMode(CENTER);  
ellipse(25, 25, 25, 25);  
ellipse(50, 50, 100, 100);  
ellipse(100, 100, 50, 50);
```

*Let's get started...*

# What about color?

# What about color?

# What about color?

# Variables

Only variables of  
type `int`  
allowed in here!

**Variable type** → `int` `catHeadX`;

**Variable  
declaration!**

Data Type	Values
boolean	true/false
byte	generic 8 bits of data
char	character ('a', 'b', ...)
color	a grayscale or RGB color
double	floating point with double precision
float	floating point (number with a decimal point)
int	integer (whole number)
long	really big integer

`catHeadX = 200;`

**Variable  
assignment!**

```
int catHeadX = 200;
```

**Variable declaration  
AND assignment!**

```
ellipse(catHeadX, catHeadY, 90, 100);
```

**Using the variable's value**

# Poll Everywhere Question:

What color will the circle be?

```
color blueColor = color(0,0,255);  
color redColor = color(255,0,0);  
blueColor = redColor;  
redColor = blueColor;  
fill(redColor);  
ellipse(50,50,75,75);
```

*Live coding continued...*

# Identifying Parts of the Code

```
/////
// Draw cat's ears
```

```
// These variables are only used here, so keep them
```

```
//
int catEarWidth = 15;
int catEarOffset = 10;
```

```
fill(220, 175, 35);
```

```
triangle(catHeadX - catHeadWidth/4 + catEarWidth/2, //x1
         catHeadY - catHeadHeight/2 + catEarOffset, // y1
         catHeadX - catHeadWidth/4, //x2
         catHeadY - catHeadHeight/2 - catEarWidth + catEarOffset, // y2
         catHeadX - catHeadWidth/4 - catEarWidth/2, //x3
         catHeadY - catHeadHeight/2 + catEarOffset); //y3
```

# Identifying Parts of the Code

```
/////
// Draw cat's ears

// These variables are only used here, so keep them
// close by
int catEarWidth = 15;
int catEarOffset = 10;
```

data type

```
175, 35);
```

```
triangle(catHeadX - catHeadWidth/4 + catEarWidth/2, //x1
          catHeadY - catHeadHeight/2 + catEarOffset, // y1
          catHeadX - catHeadWidth/4, //x2
          catHeadY - catHeadHeight/2 - catEarWidth + catEarOffset, // y2
          catHeadX - catHeadWidth/4 - catEarWidth/2, //x3
          catHeadY - catHeadHeight/2 + catEarOffset); //y3
```

# Identifying Parts of the Code

```
/////
// Draw cat's ears

// These variables are only used here, so keep them
// close by
int catEarWidth = 15;
int catEarOffset = 10;

fil      ;
tri      - catHeadWidth/4 + catEarWidth/2, //x1
          - catHeadHeight/2 + catEarOffset, // y1
          catHeadX - catHeadWidth/4, //x2
          catHeadY - catHeadHeight/2 - catEarWidth + catEarOffset, // y2
          catHeadX - catHeadWidth/4 - catEarWidth/2, //x3
          catHeadY - catHeadHeight/2 + catEarOffset); //y3
```

variable  
name

# Identifying Parts of the Code

```
/////
// Draw cat's ears

// These variables are only used here, so keep them
// close by
int catEarWidth = 15;
int catEarOffset = 10;

fill(220, 175, 255, 100);
triangle(catHeadX + catHeadWidth/4 + catEarWidth/2, //x1
         catHeadY - catHeadHeight/2 + catEarOffset, // y1
         catHeadX - catHeadWidth/4, //x2
         catHeadY - catHeadHeight/2 - catEarWidth + catEarOffset, // y2
         catHeadX - catHeadWidth/4 - catEarWidth/2, //x3
         catHeadY - catHeadHeight/2 + catEarOffset); //y3
```

integer  
value

# Identifying Parts of the Code

```
/////
// Draw cat's ears

// These variables are only used here, so keep them
// close by
int catEarWidth = 15;
int catEarOffset = 10;
```

variable  
declaration and  
assignment

```
headWidth/4 + catEarWidth/2, //x1
headHeight/2 + catEarOffset, // y1
headWidth/4, //x2
headHeight/2 - catEarWidth + catEarOffset, // y2
catHeadX - catHeadWidth/4 - catEarWidth/2, //x3
catHeadY - catHeadHeight/2 + catEarOffset); //y3
```

# Identifying Parts of the Code

```
